

Winter Storm Hazard/Impact Severity by Area January 6-9, 2017

- Heavy snow. Very hazardous, difficult if not impossible, travel conditions this weekend. Prolonged travel impacts will continue through early next week.
- Very cold temperatures this weekend into early next week will result in black ice issues through early next week.

- Heavy snow and sleet. Either way (snow or sleet), this area will see very hazardous, difficult if not impossible, travel conditions this weekend. Prolonged travel impacts will continue through early next week.
- Very cold temperatures this weekend into early next week will result in black ice issues through early next week.

- While some snow is expected, the models are trending toward more sleet, and perhaps significant amounts of sleet.
- Prolonged travel impacts through the weekend and into early next week.
- Very cold temperatures this weekend into early next week will result in black ice issues through early next week.

- Rain likely this evening and well into the overnight hours. However, it will gradually mix with sleet and snow, and possibly freezing rain, from north to south beginning around sunrise Saturday morning.
- Conditions will vary greatly from north to south. The least amount of frozen precip is expected farther south. Remember that even a small amount of snow, sleet, or freezing rain on the roads can result in dangerous travel conditions.
- Black ice may be a problem into early next week.
